PETROLEUM, COAL PRODUCTION INCREASE

INCREASE OUTPUT OF CRUDE OIL -- Zurich, Neue Zuercher Zeitung, 30 May 51

Yugoslavia's underground reserves of natural gas, petroleum, and shale oil are estimated at 56 million tons. The yearly production of crude oil has increased from 1,000 tons before the war to 340,000 tons. Last year's domestic output of petroleum and petroleum derivatives was sufficient to meet 86 percent of the country's needs. Many obsolete industrial installations have been replaced by new machines and equipment of domestic manufacture, or by imports from the US. The plan calls for 450,000 tons of crude oil to be produced in 1952.

CROATIAN PETROLEUM REFINERIES COMPLETE FIVE-YEAR PLAN -- Zagreb, Vjesnik, 8 May 51

All Croatian enterprises for processing petroleum, which include refineries at Rijeka, Slavonski Brod, and Sisak, completed their Five-Year Plans on 20 April, 254 days ahead of schedule.

Today the refineries satisfy 93 percent of Yugoslav fuel and lubricant requirements, and only specialized fuel and lubricants are imported. The refineries are also able to export special types of gasoline, gas oil, and fuel oil.

PRODUCE 30,000 MORE TONS OF COAL -- Zagreb, Vjesnik, 24 Mar 51

By the end of the first quarter 1951 coal miners in Croatia will produce about 30,000 tons more coal than in the same period of 1950. Although the production plan is not being fulfilled in all mines, production this year is much more regular, and the plan is to be completed 95 percent in the first quarter of 1951.

In the majority of mines regular production is the result of better work discipline.
